

TRIAD TZ SELECT™

Control of white clover, ground ivy, and dandelion in cool-season turfgrass

Dr. Aaron Patton, Purdue University

Trial objective

- To determine the efficacy of Triad TZ Select™ compared to TZone™ and Sure Power® for controlling white clover, ground ivy, and common dandelion in cool-season turf mowed at lawn height.

Materials and methods

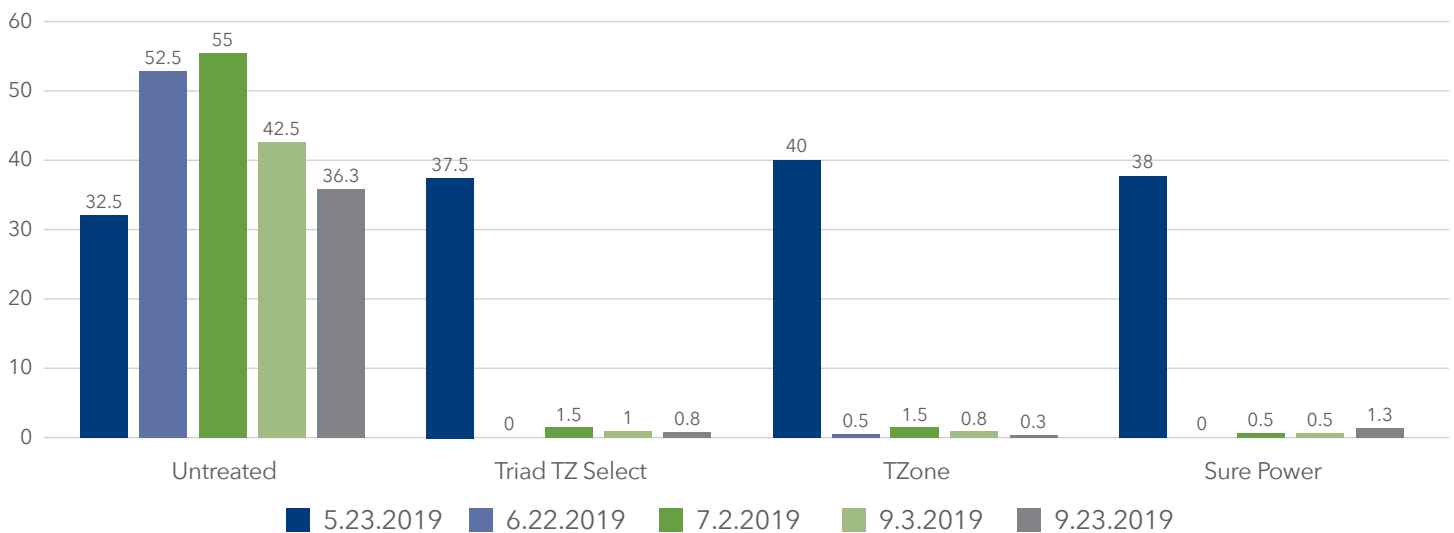

- Trial was initiated on May 23, 2019, and concluded on September 23, 2019.
- Trial plots measured 4 ft by 5 ft and were each replicated four times. Untreated control plots were included for herbicide comparisons.

- Herbicides were applied once at the initiation of the study.
- % cover of white clover, ground ivy and common dandelion was recorded in each plot (0 = complete control, 100 = no control of broadleaf).

Trial results and conclusions

- Triad TZ Select provided control that was statistically equal to TZone and Sure Power for all three broadleaf weeds.
- Researcher was very satisfied with the Triad TZ Select formulation attributes.

% white clover cover
